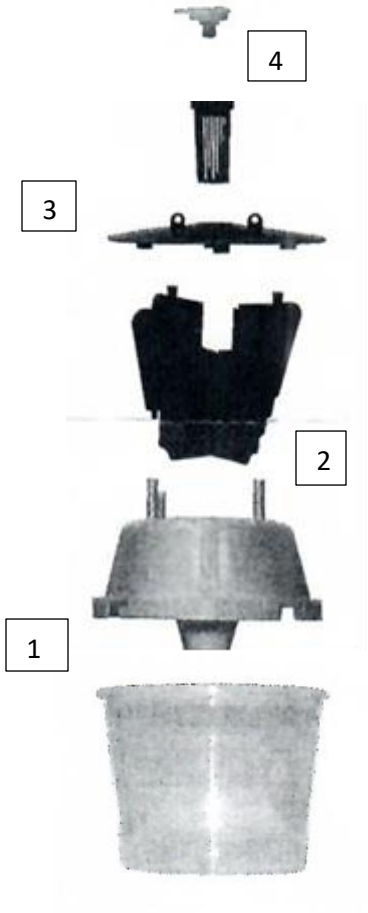
JAPANESE BEETLE RE-USABLE TRAP

NATURAL INSECT CONTROL — WHERE NATURE THRIVES

Assembly Instructions:



1. Attach the funnel to the bucket by positioning the funnel onto the green bucket and twisting until the two parts slot together.
2. Attach the vanes to the funnel by carefully pushing the 4 pegs on the vane into the raised inlets on the funnel. It is recommended to carefully push each peg in separately to avoid any damage.
3. Attach the green lid to the vanes by aligning the 4 holes in the lid with the pegs projecting from the top of the vanes. Carefully push the pegs into the holes so that the lid is fully attached.
4. Make a u shape out of twist tie and hang it from the bottom bars of lure cage, place top on lure cage, then push the lure cage through the hole in the lid from above so that cage effectively hangs below the lid.
5. The Japanese Beetle High Impact lure (included) is then attached to the twist tie via the hole in the top of the lure. The lure should hang over the funnel opening. Please refer to the video on NIC's web site under Japanese beetle reusable trap for a visual explanation on how to do this part
6. Attach the wire hanger to the two tab-holes on the lid and bend wires at both ends.
7. Hang the trap from a support such as a shepherd's hook, or post. Place the trap downwind to capture beetles before they reach your plant / shrub.
8. Place 1 trap every 60M (200 ft) around perimeter in an open bright area away from foliage.
9. After beetle season is over mid July to August do an application of Lawn Guardian nematodes to prevent your lawn from being re-infected by grubs that turn into Japanese beetles

Peel off foil covering to expose both lures in package DO NOT remove contents. Attache lure to basket with twist tie
